Summary

Overall 16 years of software development experience in different areas: high-load enterprise, cloud services, multi-platform desktop apps, embedded programming, video games development.

Worked in different roles: developer, team lead, sole developer, QA.

Passionate about IT related stuff, video games and, recently, AI technologies. Used to help others, share my experience and learn new things.

Skills

Programming languages:	Python, Java, JavaScript.
Backend:	FastAPI, REST, Spring Boot, Hibernate, SQL and NoSQL DB, RabbitMQ, AWS S3, ELK stack, GrayLog, Grafana.
Frontend:	React, AngularJS, Bootstrap, GWT, JSF, JavaFX (desktop).
DevOps skills:	clouds (AWS, Azure), Kubernetes, Docker, GitHub Actions, shell scripting, tools crafting, build & release process setup.
QA:	PyTest, Selenium, SikuliX, XRay, JMeter, SonarQube.
Work skills:	software design, programming, team leading, planning, mentoring, quality assurance.
AI real work experience:	GitHub copilot MCP, LLM chat assistance for code and documentation generation, code completion in IDE.
AI expertise:	agents and skills setup, MCP, LLM, Claude, Cursor, JetBrains Air.
Additional skills:	3D modelling in Autodesk AutoCAD/Fusion (+ basic skills in Blender and 3ds Max). 3D print experience. PCB design for DIY.

Education

Master’s degree in Computer Science (2003–2008). V.N.Karazin Kharkiv National University.

Languages

English: upper-intermediate (B2).
Ukrainian, Russian: native.

Work Experience

July 2020 – May 2026. Software Developer and QA at Waverley Software.

I worked as a Software Developer in the QA department of Waverley's client, whose focus is computer hardware manufacturing. My main task was to supply QA engineers with tools.

I participate in 3 projects here.

- On the first project, I was a solo developer of a Java desktop app.
- The second project as a lead in a group of two developers of a Python based tool set.
- Third project as a QA engineer on a complex SAAS project.

Project 3: an object storage solution compatible with AWS S3 API. Jan 2025 – May 2026.

Project description: a high-load SAAS B2B storage similar to AWS S3.

My role: QA Engineer

Responsibilities: develop test plans and autotest scenarios, create CLI tools, do manual testing, review and improve quality assurance processes.

Technologies: Python, AWS S3, Postman, GitHub Actions, Kubernetes, Go, Cassandra, Redis, PostgreSQL, GrayLog, Grafana, MinIO Warp.

Project 2: a Python based tool set. April 2022 – November 2025.

Project description: we created a tool for complex manual tests automation, mainly focused on easy integration with external tools (at this moment it has 26 integration addons).

It contains a multiplatform standalone desktop app with WebUI to execute test scenarios, and a Storage Server that acts as a test scenarios repository, a PyPI server to deliver/update app modules and addons.

Role: Lead software developer in a group of two developers.

Responsibilities: full cycle of development, delivery and support of a company internal tool.

Technologies: Python, React, FastAPI, various tools integration (including Playwright, SikuliX, Thunderbolt HDK, FIO, AWS).

Project 1: a Java desktop app to test storage device performance. July 2020 – March 2022.

Project description: QA software for disk storage devices development. Multiplatform (Mac+Win+Linux) JavaFX desktop app to measure disk device performance and reliability metrics, integrated with internal QA portal to submit reports.

Role: sole software developer.

Responsibilities: full cycle of development, delivery and support of company internal tools. Created several hardware devices: network thermal sensor and linear actuator to eject/insert thunderbolt cable.

Technologies: JavaFX, C++, Python, JS, Windows/Mac/Linux system tools integration.

March 2015 – June 2020. Senior Java developer at Waverley Software.

Project: SAAS B2B platform for home security and automation.

Project description: a B2B platform for home security and automation providers. It has a complex architecture with multiple web servers, device gateways, video streaming servers, databases, message brokers, mobile clients, REST APIs, etc.

Role: Senior Java developer

Technologies: Spring MVC + JSP, Amazon Web Services, Hibernate, OracleSQL DB, RabbitMQ, Git, Maven, Tomcat, JIRA, Stash, Jenkins.

October 2016 – January 2017. Part-time Python developer at Waverley Software.

Project: a blockchain-based ledger backend.

Project description: a ledger tool startup (web+mobile application) for the agricultural cooperatives. Each ledger record hash sum is stored in a public blockchain to protect the record against a forgery.

My role: part-time work as a contractor for dedicated tasks.

Achievements: I created a microservice application with REST API to store data in a MultiChain blockchain. Also, I created a devops tool to manage MultiChain nodes.

Technologies: Python Flask on backend, Bootstrap + AngularJS for devops app UI.

March 2014 – February 2015. Senior Java developer at Ciklum+CGI.

Project name: Kunde shop.

Project description: An e-commerce web application (shopping cart checkout wizard, built on the Hybris framework) that was integrated into an existing e-shop app.

Agile development process in a distributed team (German-Ukraine). Multiple test environments with SSH access.

My role: full stack developer.

Technologies: Java, Hybris, Spring MVC, JSP, Git, Maven, Tomcat, JIRA, Bamboo, Crucible, JMeter.

April 2013 – Mar 2014. Java developer at TEAM International.

Project name: Bond Adapt.

Project description: 15+ years old enterprise-level app for recruitment and staffing organizations. It consists of multiple different subsystems implemented in a mix of different technologies with lots of integrations with external web-services and server-side applications.

My role: all in one developer in the project maintenance team.

Technologies: Java applets, Java servlets, JSP, HTML+JavaScript, MS SQL, Surround SCM, Mantis, TestTrackPro.

Sep 2012 – Mar 2013. Java developer at TEAM International.

Project name: PLS Pro 2.0

Project description: enterprise solution for logistics services.

Role: full stack developer.

Technologies: GWTP, UIBinder, HTML/JavaScript, Spring, JUnit, Maven, Git, Redmine, Jenkins.

January 2012 – September 2012. Java developer at GlobalLogic.

Project Description: SAAS solution for telecommunications service providers.

Role: full stack developer.

Technologies: GWT, MongoDB, Morphia, Spring, Hibernate, JUnit, Ant, Tomcat, JIRA.

August 2011 – December 2011. iOS developer at Gameloft.

Project Name: Demo-team

Description: we were reducing the functionality of full version of games for iOS and building its free demo version.

My role: lead developer in a group of 3 developers.

Technologies: C++, ObjectiveC, ActionScript, GameSwf.

September 2010 – July 2011. Social network game developer at Gameloft.

Project Name: GreenFarm

Description: GreenFarm is a casual multiplayer online game that was integrated into different social networks (Facebook, Tuenti, Hi5, Orkut, Mobage, StudyVZ, CyWorld, etc.). This game had a complex backend structure with multiple servers.

My role: one of three lead developers in a big team (near 20 team members in local office + 20 more worldwide).

Technologies: ActionScript/Flex, C++ (backend), SVN.

January 2010 – August 2010. Java2ME developer at Gameloft

Project Name: Skeeball, Fast and Furious5 (partially)

Description: simulator of a real world's arcade game "Skeeball" implemented using a custom 3D physical engine and pseudo 3D graphic engine.

Fast and Furious 5 is a racing arcade game.

My role: 2nd number in a group of two devs on Skeeball project and a lead dev on FF5.

Achievements:

- I created a highly optimized 3D physics engine from scratch using fixed-point arithmetic.
- Designed a physical model of an arcade machine using the 3dsMax tool.
- I created a conversion tool (from 3dsMAX to internal game physics format) using the MaxScript programming language.

Technologies: Java, MAXScript, 3dsMAX

June 2008 – November 2008. Junior Java developer at TeamDev.

Project: Quipukit (OpenFaces). An open-source JSF components library.

Achievements: created two components for this library (BorderLayoutPanel and ForEach). Created a plugin for TeamCity build server to support the Mercurial VCS.

Technologies: JSF, Java, HTML, CSS, JavaScript, JUnit, IntelliJ IDEA, SVN, Jira, TeamCity.
